Not illustrated. 1915 Excerpt: .Attempts have been made to measure the current intensity of a flash of lightning, and a more or less satisfactory estimate, based upon calculation and measurement, has been obtained, but aside from this there is almost no exact knowledge of lightning except that inferred from points of similarity between lightning and other electrical phenomena with which we are familiar. The need for spreading information on the subject of protection against lightning is also very apparent. There is a widespread popular notion that lightning rods are quite expensive, and at best not as inexpensive as fire insurance. The extent to which this idea is erroneous will be brought out hereafter in this paper. There is also a great need for emphasizing the fact that not every artisan who can scale a building is a fit person to plan and install a system of lightning rods. Although a system of lightning rods appears to be a very simple affair, the element it is intended to control is not governed by simple laws; that is, laws such as might be readily understood by an artisan not specially trained in this field. As a matter of fact, the unsuspected weaknesses which, in many cases, have developed in lightning-rod systems at the critical moment, and have lead to serious damage, could in most cases easily have been prevented if the plans of the systems had been submitted to someone qualified to pass upon them previous to their installation. 5.
