The Gerber for-menmt1nn test. the temperature of the water is kept at 104-106 F., for six hours, when the rack is taken out, the tubes gently shaken, and the appearance of the milk, its odor, taste, etc., carefully noted in each case. The tubes are then again heated in the tank at the same temperature as before, for another six hours, when observations of the appearance of the milk in each tube are once more taken. The tainted milk may then easily be discovered by the abnormal coagulation of the sample. According to Gerber, good and properly handled milk should not coagulate in less than twelve hours, when kept under the conditions described, and should not show anything abnormal when coagulatcd. Milk from sick cows and from cows in heat, or with diseased udders, will always coagulate in less...
